TIP-TOP GARDENS - 1938

In Memoriam  
REV. JACOB STORER

Oct. 12, 1861      April 6, 1938

It was his wont to rise early in the morning and enjoy the dawning day while the dew was still glittering on the flowers he loved; and so too, he entered the dawn of eternal day at 8:00 A.M., after a long and useful life of 76 years.

He was born in Buch, Switzerland, and educated in the University of Basle.

In 1884 he became the first pastor of Emanuel Evangelical Reformed Church at the corner of Humboldt Parkway and E. Utica St., Buffalo, N.Y., which he faithfully served for 25 years.

He was an ardent lover of all things beautiful, and intensely interested in all of the fine arts.

As a musician his fine judgement of the classics was an education to all who knew him intimately, and his gentle touch at the piano, even during his last year, had a most impressive charm.

Astronomy and Chess were among his intensive hobbies.

In the field of literature, his selection of the first books forming a library for the young people of Emanuel's Church was a guide for many in forming habits of good reading.

His expert knowledge of languages enabled him, in the year 1890, to publish an elaborated translation of the Book of Romans, from the original Greek into German.

In 1910 he published a Compendium of Biblical Texts and Topics intended as a handbook for the use of ministers.

After the death of his devoted wife, Julia (nee Kuhn), in January 1928, Rev. Storer took up his abode with his only son, James, who is secretary of the Buffalo Board of Education.

The resignation of his pastorate in 1920 due to ill health enabled him to pursue his hobby of flower growing in a greater measure. In 1921 he joined the American Iris Society and became a devoted propagator of irises and peonies. In 1931 he became associated in the establishment of TLP-TOP GARDENS where hundreds of the hybrids which he created will continue to be grown as a memorial to him. In 1936 he attended the annual meeting of the A.I.S. at Hartford, Conn., in company with Mr. Stuntz, where many Iris enthusiasts enjoyed the charm of his personality and good taste in judging irises.

Following are the names of irises which have been bred and registered by Rev. Storer:

Adirondack, Albright, Casenka, Haifa, Inglis, James Storer, Kensington, Louis Willert, Melissa, Niagara Falls, Nora Storer, Ozark, Salas y Gomez, Tonawanda, and Winifred. He had decided upon several more for this year.

He had a transcendent love for his fellowmen; and this impelled him to publish two books, "Thoughts that Build" in 1924, and "The Spirit of Reality" in 1931, in order that he might pass on his discoveries of the best ideas to promote a happy life. He completed the manuscript for a third inspirational book just before his death.

Always grateful to God for all His blessings, his favorite quotation was Psalm 103.

It can truly be said of Rev. Storer, in the words of the centurion at the crucifixion: "Certainly this was a righteous man and a son of God".

TIP-TOP GARDENS

101 LIBERTY TERRACE SNYDER, N.Y.

CATALOG 1938

There is no flower with such varied characteristics to fascinate the flower-lover as the iris. Even a very small collection of named varieties is a perpetual rejuvenator of ones sense of the beautiful with each approaching season.

On account of the addition of hundreds of new kinds we give only the essential points of identification familiar to members of the American Iris Society. Briefly defined these are:

Numbers in first column = rating by A.I.S. and year of registration.

#= Fragrance. x=tender. %≠ illustrated in some book or catalog.

TB= Tall bearded. EE, E, EM, M, MF, F, FF= Blooming season, i.e., Extra early, early, midseason, fall. W, B, R, S, Y= predominant color, i.e., white, blue, red, shot or blend and yellow. Number following color letter= 1, 4, 7 self; 2, 5, 8= veined; 3, 6, 9= bi-color. L, M, D= light, medium, dark. Height of bloom stalk is given in inches.

Numbers preceding price in last column = location in our gardens.

\$= varieties outmoded. We do not recommend these unless you are a collector because they have been superseded by better varieties.

Prices are for single blooming size rhizomes or three for the price of two. Wholesale on such varieties of which we do ~~not~~ have a surplus, 50% off in lots of six of a kind.

Prices on peonies are given for single bud roots, but we do not recommend less than a three eye division.

Deposit required on orders for future delivery.

We pay carriage except on wholesale orders.

The annual meeting of the American Iris Society will be held in Cincinnati, Ohio. Group visits will be made to famous iris gardens in the vicinity.

## INDEX

I. IRISES

PAGE

## Symbol:

TB--Bearded (Tall) Irises (pogoniris)	4-24
ST--Rev. Storer's New Seedlings	24-29
FF--Autumn Blooming Irises	29-30
DB--Dwarf Bearded Irises	30-31
DUT-Dutch Irises (xiphium hybridum)	31
ENG-English Irises (xiphiodes)	31
JAP-Japanese Irises (kaempferi)	31-32
M---Miscellaneous Species of Irises	32
MB-OMC-Pogo-cylus Hybrid Irises	33
SIB-Siberian Irises (small apogon)	33
SBAW-Spanish Irises (xiphium)	33
SPUR-Spuria Irises (large apogon)	33

## II. PEONIES

34-36

## III. POPPIES (Papaver Orientale)

36-37

## IV. PERENNIALS (Such as Delphiniums, hemerocallis, lilies, spirea, tamarex, tritoma, etc., interspersed among the irises 15¢ up according to size.)

## GARDEN LABELS

We recommend the Perfect Garden Label made by Howard Hammett, 630 Main Street, Hartford, Conn. It is all that the name implies. The kind we use comes with wires attached at \$ 3.00 per hundred. For home gardens those with pressed shank are superior since they require no stake and can be marked with an ordinary lead pencil; in bundles of 25 for \$ 2.00. Ask us for illustrated circular. Our stakes are made of #6 galvanized wire, 2½ ft. long, slotted at the top for holding labels; 25 for \$ 2.00.

## FERTILIZERS

The best nourishment we have found for all plants is "Loehr's Noburn". It has a body of sheep manure and bone-meal, nitrogen 3.52%; phosphate 4.34%; potash.91%. One teaspoonful to a 4" pot. For outside use scatter heavily and water thoroughly. 5lbs. \$ .25; 25lbs. \$ 1.00; 100 lbs. \$ 3.50.

2009

Figure 1 is a line graph illustrating the relationship between the percentage of total effort and the percentage of total catch for various fish species. The x-axis represents the 'Percentage of total effort' (0 to 100), and the y-axis represents the 'Percentage of total catch' (0 to 100). The legend identifies the following species: Blue (Bluefish), Green (Atlantic croaker), Red (Atlantic menhaden), Yellow (Atlantic silverside), Purple (Atlantic tomcod), Orange (Atlantic herring), and Grey (Atlantic blue whiting). Bluefish shows a high catch for low effort, while Atlantic croaker and Atlantic menhaden show high catch for high effort.

1. *Chlorophyll a* (Chl *a*)

The diagram illustrates a two-stage sampling process. At the top, a large circle represents the 'Population (N)'. Inside this circle, a smaller circle represents the 'Sample (n)'. This sample is further divided into two parts: a smaller circle labeled 'Subsample (m)' and a larger circle labeled 'Remaining Sample (n-m)'. Arrows indicate the flow from the population to the sample, and then from the sample to the subsample and the remaining sample.
